

ISAH DAUDA

Blockchain Engineer and Security Researcher

+2348103800607 | koinated@gmail.com | [GitHub](#) | [LinkedIn](#) | trinnode.tech

SUMMARY

Cyber Security researcher and blockchain developer with hands-on experience across smart contract auditing, web application penetration testing, and DeFi protocol development. My work spans competitive audit contests, bug bounty programmes, and the independent design and deployment of production Web3 protocols. A background in full-stack blockchain engineering means I approach security assessments from the inside out, tracing vulnerabilities through architecture and business logic rather than just running automated scans. I am comfortable operating across both Web3 and Web2 attack surfaces and have produced written security reports, proof-of-concept scripts, and remediation guidance across multiple engagements.

SKILLS

Programming:	Python, TypeScript, Solidity, Bash scripting, Rust (familiar)
Security and Auditing:	Web application penetration testing, API security testing, smart contract auditing, bug bounty hunting, threat intelligence.
Penetration Testing Tools:	Burp Suite, Metasploit, Nikto, Nessus, SQLMap, Gobuster, Hydra, John the Ripper, Netcat, Impacket, Certipy, BloodyAD, nxc
Network and Traffic Analysis:	Wireshark, Nmap, Aircrack-ng, Kismet, Tcpdump, Netdiscover
Digital Forensics:	Autopsy, Volatility, Binwalk, ExifTool, Recuva
OSINT and Threat Intelligence:	Maltego, Shodan, theHarvester, Recon-ng, MISP, OpenCTI
Blockchain and Web3:	Solidity, Zero Knowledge, ERC, vulnerability analysis and detection.
Smart Contract Security Tools:	Slither, Mythril, Glider (r.xyz), Foundry fuzz testing, Echidna, Manticore, Aderyn, 4naly3er
Operating Systems:	Kali Linux, Parrot OS, Ubuntu, Windows Server, Windows 7-11, WSL2, VirtualBox, VMware
Soft Skills:	Team collaboration, communication, report writing

EDUCATION & CERTIFICATIONS

B.Tech in Cyber Security Science, Federal University of Technology, Minna, Niger State	2021 - 2026
Certified AppSec Practitioner (CAP) - view The SecOps Group	April 2025
Certified Network Security Practitioner (CNSP) - view The SecOps Group	April 2025
HCIA - Cloud Service V3.0 Course - view Huawei Talent Online	April 2025
Certified Cyber Security Analyst (CS3A) - view CyberWarFare Labs	September 2023
Certified Cyber Threat Intelligence Analyst (CTI 101) - view Udemy	June, 2023

Practical Ethical Hacking - view TCM Security	February 2024
Linux Privilege Escalation - view TCM Security	March 2024
MasterCard - Cyber Security Job Simulation - view Forage	December 2023

WORK EXPERIENCE

Web3Bridge - Student Intern, Web3 Security and Development Track Contributed to open-source repositories under the Blocceducare organisation on GitHub.	July 2025 - Oct. 2025
Digital Forensic Investigation Conducted a forensic investigation on a disk image obtained from a simulated crime scene, using Autopsy to analyse artefacts and generate findings report.	August 2024
Southern Kaduna Information Technology Professional Network - Volunteer Provided first level technical support, resolving 30+ software issues at a community event.	October 2024
Cybersecurity Education Initiative (CYSED) - Volunteer Collaborated on cyber awareness sessions across three secondary schools, educating 500+ students on phishing and social engineering risks, and supported a wider public cybersecurity awareness campaign in Minna.	October 2023
Cyber and Forensics Security Solutions (CFSS) - <i>Cybersecurity and Ethical Hacking Intern (Remote)</i> Completed an internship in penetration testing methodology, information gathering and vulnerability mitigation on live digital infrastructure.	Nov. 2023 - Dec. 2023

BUG BOUNTY

Active bug bounty hunter across three platforms, covering both Web2 and Web3 targets.

- ❖ **Cantina:** Smart contract and DeFi protocol security reviews.
- ❖ **YesWeHack** and **Bugcrowd:** Web application and API security testing across varied programme scopes and industries.

All platform work involves manual vulnerability research, responsible disclosure and impact focused report writing for programme owners.

SELECTED PROJECTS

VERIDAQ: ZK Credential Verification Protocol

Built a full-stack zero-knowledge credential verification system, deployed on Base Sepolia. Security focus was on circuit constraint integrity and proof soundness against witness manipulation.

Stack: Circom, Solidity, Fastify, Next.js, Base Sepolia

Glider Query Contest: r.xyz

Wrote static analysis queries targeting ERC-2771 context spoofing via delegatecall, multicall vulnerability patterns and unmasked calldata address flows, submitted to the public r.xyz Glider database contest.

Stack: Glider query language, ERC-2771, Solidity vulnerability patterns

SealBid: FHE Sealed-Bid Auction Protocol

Built a sealed-bid auction protocol on Fhenix using CoFHE encrypted integer types, keeping bid values encrypted throughout the auction lifecycle and removing front-running at the contract level without a commit-reveal scheme. Submitted to the Fhenix buildathon.

Stack: Solidity, CoFHE, Fhenix, FHE primitives

StakeSafari v2: DeFi Staking Interface - [Live](#)

Built and deployed a DeFi staking frontend, keeping wallet interaction logic and on-chain read/write operations cleanly separated across components.

Stack: React, Vite, Tailwind CSS, ethers.js

Evil Twin Detection IDS

Built a passive wireless intrusion detection tool in Python using Scapy, identifying evil twin access points through RSSI fingerprinting and MAC anomaly correlation. Includes 21 passing pytest tests and runs on live wireless interfaces.

Stack: Python, Scapy, pytest

Judgement Day: AI Red Teaming Competition

Produced adversarial test cases across AI triage and suppression scenario tracks for the AIM Intelligence and Korea AI Safety Institute red teaming competition.

Weather Alert Software - [GitHub](#)

Built a weather alert application in Python that emails or messages subscribers by 6am to remind them to carry an umbrella if rain is forecast during their outdoor hours (7am to 5pm).

Cyber Security Beginner Roadmap - [GitHub](#)

Collaborated on an extensive roadmap to guide people entering cyber security, structured around their individual objectives.

COMMUNITY AND OPEN SOURCE

Web3Bridge Cohort XIII: Completed the structured Web3 development and security programme and contributed to open source Blocceducare repositories on GitHub.

Build Wave (drips): Open source contributor under @trinnode on Stellar and Soroban TypeScript SDK repositories.
